

German Reichstag building scaled 1:500 for DIN A3 printing - generated from the 3D CityGML model of Berlin (Berlin Partner für Wirtschaft und Technologie GmbH, <https://www.businesslocationcenter.de/downloadportal/>). The 3D rendering of the building on the cited website shows how the various parts fit together. The kit was generated with the tool <https://github.com/SteffenGoebbels/citygm12papermodel> provided by the iPattern institute, Niederrhein University of Applied Sciences, Krefeld, Germany. The tool is described in the paper: "Automatic Unfolding of CityGML Buildings to Paper Models. Geographies 1 (3), 2021".
